IBM Jobs Near Me

Responsibilities:

- Design and develop robust, scalable, and efficient data pipelines to extract, transform, and load data from various sources into target systems.
- Collaborate with cross-functional teams to understand data requirements and ensure the integrity, quality, and reliability of data throughout the pipeline.
- Build and maintain data infrastructure components, including data storage systems, databases, and data warehouses.
- Optimize data storage and retrieval mechanisms to ensure high performance and availability.
- Collaborate with data scientists and analysts to understand analytical requirements and assist in data exploration, visualization, and modeling.
- Identify opportunities for data optimization, performance tuning, and

automation to enhance data processing and analysis capabilities.

IBM Careers

Requirements:

- Strong programming skills in languages such as Python, Java, or Scala.
- Proficiency in data processing frameworks and tools such as Apache Spark, Hadoop, SQL, and ETL/ELT processes.
- Experience with cloud platforms and services, such as AWS, Azure, or GCP, and familiarity with related data technologies (e.g., S3, Redshift, BigQuery).
- Knowledge of database systems, both SQL and NoSQL and proficiency in writing efficient queries and optimizing data access.
- Understanding of data modeling concepts and best practices.
- Familiarity with version control systems, data integration techniques, and data governance principles.
