IBM Careers

Responsibilities:

- Collaborate with business analysts, designers, and testers to understand user needs and translate them into efficient and user-friendly applications.
- Design, develop, and implement application logic using modern programming languages and frameworks.
- Write clean, maintainable, and testable code that adheres to coding standards and best practices.
- Integrate applications with external systems and APIs to ensure seamless data flow and functionality.
- Conduct unit and integration testing to ensure application quality and performance.
- Participate in code reviews and provide constructive feedback to colleagues.

- Stay updated on the latest technology trends and advancements in the application development field.
